

Protac SenSit®

– a sensory-stimulating and calming chair

Protac SenSit® is a sensory-stimulating chair that provides a pleasant enveloping feeling to the entire body. The balls in the chair and its four wings stimulate the muscle-and-joint sense and the sense of touch through deep and dynamic pressure, promoting an improved body awareness and a calming feeling for body and mind. The chair has balls in the back, in the four wings and in the seat which also has a filling of granulate to make the chair adjustable and comfortable for the individual user. The wings can also be used to stabilize the sitting posture and give endless possibilities for individual adjustment to the need for sensory stimulation.

The chair is suitable for children, adults and elderly and can alleviate symptoms of sensory impairments, physical and mental unrest e.g., ADHD, autism, psychiatric disorders, dementia, brain damage, spasticity, and developmental disorders. The chair can also be a sensory-stimulating alternative for wheelchair users during the day. Protac SenSit® functions as a safe base in institutions, classrooms, sensory rooms, living rooms, care centers, psychiatric and somatic hospitals and many other places.

Protac SenSit®
alleviates symptoms
of physical and
mental unrest

The concept
is the same through
all models – besides each
model has a specific and
individual feature

A safe
and calming
base

PROTAC®
INTEGRATING SENSES

Protac SenSit® – standard model

Protac SenSit® – high back model

Sensory-stimulating ball chair for all ages

Protac SenSit® is a ball chair for children and adults with mental and physical disorders. The balls stimulate the muscle-and-joint sense and the sense of touch through deep and dynamic pressure, promoting an improved body awareness and a calming feeling for body and mind.

We recommend the high back model for users over 180 cm for optimal comfort.

wheelchair
users

Protac SenSit® Nature

For outdoor rehabilitation

The Nature-chair is a safe and well-known base outside and can help to organize the many sensory input from the nature. It is among other places used in sensory-gardens and school yards.

The chair is produced in a durable, waterproof and windproof material and has taped seams and zippers. The chair can also be used indoors and is particularly relevant where strict hygienic requirements are necessary or for users with incontinence problems.

Colour availability:

Protac SenSit® Straight

Model with extra stability

The Straight-chair has a foam core, which makes the chair stable. The backrest is straight, and the seating position is similar to an ordinary recliner. This makes the chair particularly relevant for users who find it difficult to sit down and stand up on their own.

Colour availability:

Protac SenSit® Puff

A footstool or an extra seat

The puff is a footstool with balls on the top and granulate filling in the bottom. It both functions as a footstool and as an extra seat. We recommend that the Protac SenSit® is always used with the puff for optimal comfort.

Besides, the puff is very useful for teachers, care takers and therapists as it makes it easy for them to sit next to the user of the ball chair and at eye level - opening up for close and calm conversations.

Colour availability:

Protac SenSit® Frame

User friendly frame

Protac SenSit® Frame is a frame with handles and an inclined bottom giving the Protac SenSit® chair several user-friendly features. The handles makes it easier for the user to enter and get up from the chair and the inclined bottom makes the seating position in the chair higher and more comfortable for persons with functional disabilities. The two wheels in the back make it possible to tilt and easily move the chair.

Protac SenSit® Frame provides a possibility to benefit from the sensory-stimulating effect from the ball chair to all users despite physical impairments.

Colour availability:

Protac SenSit®

- Calming and sensory-stimulating ball chair

- Can easily be cleaned with disinfecting wipes

CASES

20-year-old woman with a psychiatric diagnose

"The woman was supported by the staff to use the Protac SenSit® ball chair but it quickly became her own strategy to use the chair. She experienced calmness in her body and mind and she became more able to resist the urge for self-harming behavior."

68-year-old lady with Alzheimer's

"The woman lives in a special care center and her day is characterized by physical and mental unrest, and constant walking in the hallways. She feels calm and secure in the Protac SenSit® and she is able to relax. Afterwards, she is able to concentrate on eating, and the chair has a positive effect on her unrest in general."

Mental energy to 18-year-old man with CP

"Protac SenSit® has given him enough mental energy to stay in the living room without being uncomfortable or self-harming. Besides, he uses the chair to calm down after training."

Adult man with anxiety

"The ball chair's "cave- like" feeling made the anxiety and restlessness in my body gradually disappear. The wings of the Protac SenSit® ball chair feel as if they are holding me."

6-year-old girl with motor unrest

"The motor and emotional unrest disappears when she sits in Protac SenSit®. She automatically goes to the chair and at first she is very quiet. After a while, she starts to communicate, and her speech is clearly more coherent and organized. She is much calmer and more concentrated after using the chair."
